Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

1. Applicant's election of Species I: Figs. 4A-D in the reply filed on 2/10/05 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Dusbabek et al. (5,968,069). Regarding to claims 1, 2 and 6, Dusbabek et al. disclose a catheter having an elongate body (212), the body (212) comprising a tubular member (216) surrounded the elongate body wherein the walls of the tubular member is corrugated and including a plurality of ribs (fig. 30-33), a stent (218) and a support region (214) is formed over the corrugated section.

Regarding to claims 1 and 6, Dusbabek et al. also discloses a catheter having an elongate body (372, fig. 43-45), the body being a tubular member and the tubular member having at least one corrugated section (354) in the distal

region, a support region (358) formed over the corrugated section and a stent (360).

Response to Arguments

4. Applicant's arguments filed 9/21/04 have been fully considered but they are not persuasive. Applicant argues that Dusbabek reference fails to disclose the hollow tubular member [comprising the catheter] wherein at least one section of the walls of said tubular member in the distal region is corrugated and Examiner is mistaken in attempting to correlate the support region taught by Dusbabek to a catheter having one or more sections comprising corrugated wall section. Examiner respectfully disagrees. Dusbabek's catheter comprising a corrugated tubular member. The claim languages do not limit the catheter to only one tubular member and that only one tubular member being corrugated at a distal region (see the rejection above).
